

Key Features and Benefits of the AUTOFLAP

- **Driver Safety:** The primary benefit is keeping the driver on the ground; eliminating the need to climb onto the truck or trailer to secure the rear flap or removing a bow cap
- **Automated Operation:** As the tarp system travels to the rear of the truck or trailer, the spring-loaded AUTOFLAP automatically is engaged and the gap between the last bow and the tailgate is covered
- **Time & Effort Savings:** This hands-free operation saves significant time and effort on every load
- **Compatibility:** It is available as an option for all Cramaro cable systems; including mesh, vinyl, semi-waterproof and the Mentor
- **Versatility:** The AUTOFLAP fits on most trucks or trailers of any length or width
- **Efficient Design:** The AUTOFLAP is constructed with a steel frame that is attached to the rear bow. When the system is in its open position, the AUTOFLAP is in a vertical position, taking up no additional loading space

The AUTOFLAP is an innovative option for the SLIDE N' GO cable system designed to seal the rear section of a Truck or Trailer
